

Nguyen Hoang Thien

Software Engineer | Backend-Focused

Ho Chi Minh City, Vietnam | 0948384949 | thiengk563@gmail.com

thiennh.dev | github.com/thiennhdev | linkedin.com/in/thien-nguyen-web

PROFESSIONAL SUMMARY

Junior Software Engineer with 2+ years of hands-on experience building backend and full-stack features for production systems. Worked on order and finance workflows, real-time communication, and high-concurrency services using Go, Node.js, React, and Python. Comfortable with PostgreSQL, Redis, RabbitMQ, Kafka, Temporal, gRPC, and WebSocket-based architectures, with a focus on reliable APIs, maintainable code, and business-critical system behavior.

TECHNICAL SKILLS

Languages: Go, TypeScript/JavaScript, Python, Java, C
Backend / Data: REST APIs, gRPC, PostgreSQL, Redis, RabbitMQ, Kafka, Temporal, WebSockets, Elasticsearch
Frameworks / Tools: Node.js, React, Next.js, Docker, Kubernetes, Nginx, CI/CD
Practices: Clean Architecture, event-driven systems, modular design, concurrency handling, data consistency, Agile/Scrum, SDLC

PROFESSIONAL EXPERIENCE

Gearment <i>Software Engineer</i>	Dec 2024 - Present
- Engineered Go backend features for order and finance modules, including G-Credit and tiered pricing workflows, supporting G-Credit transaction value in the hundreds of thousands per month. - Optimized large dataset import/export jobs for back-office operations over order datasets with millions of rows, reducing memory pressure and lowering timeout risk in asynchronous processing flows. - Implemented back-office hold, refund, and cancellation workflows for orders, with logging and audit capabilities to improve traceability and keep states consistent. - Developed partner webhook and integration flows with asynchronous processing to support reliable external communication.	
Esol Labs <i>Full-Stack Developer</i>	Jul 2023 - Dec 2024
- Developed Go and Python services for a high-concurrency reward claiming system used in Web3 campaigns and livestream events. - Integrated partner protocols including Lido and DWF Labs to support custom reward distribution workflows. - Built modules for a SaaS management system using Clean Architecture, covering order flows, permissions, and transactional data handling. - Improved chat and video features using React, WebSockets, and Redis for more reliable real-time communication. - Stabilized React frontend state handling during video calls to prevent session state loss and reduce disruptions in live interactions.	

SELECTED PROJECTS

Hostie

Apr 2024 - Present

Personal Startup Project

- Building a B2B platform that connects independent sales agents with apartment hosts for short-term rental operations.
- Led a 5-member team across product research, feature planning, development, and deployment.
- Built booking, search, communication, and real-time agent-host workflows using Go, Node.js, Next.js, PostgreSQL, Redis, RabbitMQ, WebSockets, and Elasticsearch.

Linkable - AI Data Analyst Assistant

Gearment AI Hackathon Project

- Engineered a secure multi-tenant AI data analyst platform using Openclaw, isolated execution environments, and dedicated pods to enforce strong data privacy and session isolation across teams.
- Integrated the Model Context Protocol (MCP) with enterprise tools including Metabase, ClickUp, and internal backend repositories to support business intelligence, sprint analysis, and workflow tracking.
- Built Playwright and Chrome MCP DevTools pipelines for URL-based web scraping and data extraction, enabling the LLM to crawl, parse, and analyze external content from direct links.
- Developed file-based reporting, execution plan tracking, dynamic LLM profile management across multiple providers, and ClickUp SSO flows for end-to-end AI workflows.

EDUCATION

FPT University

Dec 2020 - Dec 2024

Software Engineering

CERTIFICATIONS

- A Practical Guide to Kubernetes
- MCP Fundamentals for Building AI Agents
- Claude Code in Action
- User Experience Research and Design
