

NGUYEN HOANG THIEN

Software Engineer · Backend & Distributed Systems · CRM/ERP

Ho Chi Minh City, Vietnam | 0948 384 949 | thiengk563@gmail.com | thiennh.dev | github.com/thiennhdev | linkedin.com/in/thien-nguyen-web

PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 2+ years of production experience building **CRM/ERP back-office systems**, high-concurrency distributed services, and AI-enabled workflows. Delivered order and finance modules processing **\$100K+ in monthly transaction value**, optimised data pipelines handling **1M+ row datasets**, and led a 5-member team from product research to cloud deployment. Proficient in **Go, Node.js, Python, and React** with deep hands-on use of PostgreSQL, Redis, RabbitMQ, Kafka, Temporal, gRPC, WebSockets, and Elasticsearch in production environments.

TECHNICAL SKILLS

Languages: Go, TypeScript / JavaScript, Python, Java, C

Backend & Data: REST APIs, gRPC, PostgreSQL, Redis, RabbitMQ, Kafka, Temporal, WebSockets, Elasticsearch

CRM / ERP Domains: Order management, finance & billing workflows, partner integrations, audit logging, event sourcing, back-office operations

Frameworks & Tools: Node.js, React, Next.js, Docker, Kubernetes, Nginx, CI/CD (GitHub Actions)

Architecture & Practices: Clean Architecture, event-driven design, concurrency handling, data consistency, Agile / Scrum, SDLC

PROFESSIONAL EXPERIENCE

Gearment · Software Engineer — CRM/ERP & Back-Office Platform · Dec 2024 – Present

Focus: Go · CRM/ERP order & finance modules · large-scale import/export · Kafka integrations · auditability & state consistency

- Architected core **CRM/ERP back-office features** in Go covering the complete order lifecycle (creation, hold, modification, cancellation, refund), serving operations teams managing **10,000+ orders/month**.
- Engineered **G-Credit pricing and tiered-pricing ERP finance workflows**, processing **\$100K+** in monthly transaction value with full audit trails and state-machine consistency guarantees.
- Optimised async import/export pipelines for **ERP back-office datasets exceeding 1M rows** — reduced peak memory pressure by **~45%** and eliminated timeout failures via chunked streaming and Go worker-pool tuning.
- Implemented **hold, refund, and cancellation workflows** with structured event logging and auditability, cutting mean incident-investigation time by **~50%** through complete order-state traceability.
- Built a reliable **partner webhook and integration layer** backed by Kafka event streams, reducing external communication failure rate by **~30%** and enabling replay/reprocessing of failed events without data loss.
- Standardised ERP module patterns and back-office execution flows, reducing feature-onboarding time for new engineers by **~25%** through consistent code structure and predictable system behaviour.

Esol Labs · Full-Stack Developer · Jul 2023 – Dec 2024

Focus: Go & Python services · high-concurrency reward systems · React real-time features · SaaS modules · Clean Architecture

- Built a high-concurrency reward-claiming backend in Go sustaining **5,000+ simultaneous requests** during peak Web3 campaigns and live-stream events with no data inconsistency or outages.
- Integrated **Lido and DWF Labs** partner protocols for custom reward-distribution workflows, reducing manual reconciliation effort by **~60%** through automated on-chain event handling.
- Developed **8+ SaaS management modules** (order flows, permissions, transactional data) using Clean Architecture, enabling clear domain separation and measurably faster cross-team integration.
- Improved real-time chat and video features with React, WebSockets, and Redis pub/sub — reduced session drop rate by **~35%** and message latency by **~20%** under high concurrent load.
- Stabilised React client-side state during live video sessions using optimistic updates and idempotent sync, preventing session loss for **99%+** of concurrent users.

SELECTED PROJECTS

Hostie · Founder & Tech Lead (Personal B2B Startup) · Apr 2024 – Present

Focus: Go · Node.js · Next.js · PostgreSQL · Redis · RabbitMQ · WebSockets · Elasticsearch · AWS

- Built a B2B short-term rental platform connecting independent sales agents with apartment hosts, eliminating manual phone-based booking coordination across multiple operational workflows.
- Led a **5-member team** through full product lifecycle — market research, architecture, iterative development, and AWS deployment — delivering a working MVP in **under 4 months**.
- Designed a multi-party booking engine with real-time WebSocket messaging, Elasticsearch-powered property search (**<100ms P95** via index tuning + Redis caching), and event-driven availability sync via RabbitMQ.

Linkable — AI Data Analyst Assistant · Gearment AI Hackathon Project · 2024

Focus: Openclaw · MCP · Isolated execution pods · Playwright · Chrome DevTools · ClickUp · Metabase

- Engineered a secure **multi-tenant AI analyst platform** using isolated execution environments and dedicated pods to enforce strict data privacy across **10+ internal teams**.
- Integrated **Model Context Protocol (MCP)** with Metabase, ClickUp, and internal repositories, enabling LLM-driven BI queries, sprint analysis, and workflow tracking without manual data export.
- Built Playwright + Chrome DevTools MCP pipelines for URL-driven web scraping, enabling the LLM to autonomously crawl, parse, and analyse external data from direct links.
- Implemented ClickUp SSO and multi-provider LLM profile management, supporting seamless end-to-end AI workflows for non-technical business stakeholders.

EDUCATION

FPT University — B.Sc. Software Engineering · Dec 2020 – Dec 2024

CERTIFICATIONS

- A Practical Guide to Kubernetes — Educative
- MCP Fundamentals for Building AI Agents — Educative
- The Complete Guide to Spring 6 & Spring Boot 3 — Educative
- Claude Code in Action — Anthropic / Skilljar
- User Experience Research and Design
